Docket No. AUS920010358US1

## ABSTRACT OF THE DISCLOSURE

## METHOD, SYSTEM, AND PRODUCT FOR PRE-ENCRYPTING STATIC INFORMATION TRANSMITTED BY SECURE WEB SITES

A data processing system, method, and product are disclosed for pre-encrypting static information transmitted by secure Web sites. The data processing system includes a server computer system coupled to a client computer system utilizing a network. The server computer system receives a request for a secure Web page that is maintained by the server. The secure Web page includes dynamically-changing information and static information. The server encrypts and transmits the encrypted dynamically-changing information. The server determines whether the static information has been pre-encrypted. If the static information has been pre-encrypted, the server bypasses the encryption step and transmits the pre-encrypted static information.
